Firewall (security groups) [Info](#)

A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.

☒ Create security group

☐ Select existing security group

We'll create a new security group called 'launch-wizard-2' with the following rules:

☒ Allow SSH traffic from
Helps you connect to your instance

Anywhere
0.0.0.0/0

☒ Allow HTTPS traffic from the internet
To set up an endpoint, for example when creating a web server

☒ Allow HTTP traffic from the internet
To set up an endpoint, for example when creating a web server

Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Beraktuk a puttyba a kulcsot, amit generáltunk korábban és rácsatlakoztunk a publikus IP címre

És bent is vagyunk 😊

Docker telepítése:

sudo apt update

sudo apt upgrade -y

sudo apt install -y docker.io docker-compose

sudo systemctl enable docker

sudo systemctl start docker

sudo usermod -aG docker \$USER
